CSC336 Lab Midterm – Kith NYC Replica

Name: Saqlain Ali Sattar **Roll No:** FA24-BCS-152 **Exam date:** 2026-10-29

Value	Formula	Result
N	Roll-number based	52
Breakpoint BP	600 + N	652px
Accent hue H	(N × 7) mod 360 = 364 mod 360	4° → hsl(4, 70%, 45%) red
Mega-menu columns K	(N mod 3) + 3	4
Cart limit per product	(N mod 4) + 2	2
Delivery date range	exam date to N days later	2026-10-29 to 2026-12-20

Task 1: Mega-Menu (HTML + CSS only)

The "Shop by Category" item opens a full-width mega-menu panel. It uses no JavaScript: the panel is revealed with `:hover` and `:focus-within`. With K = 4 it shows four columns: Footwear Collabs, Outerwear & Coats, Apparel & Hoodies, and Bags & Travel.

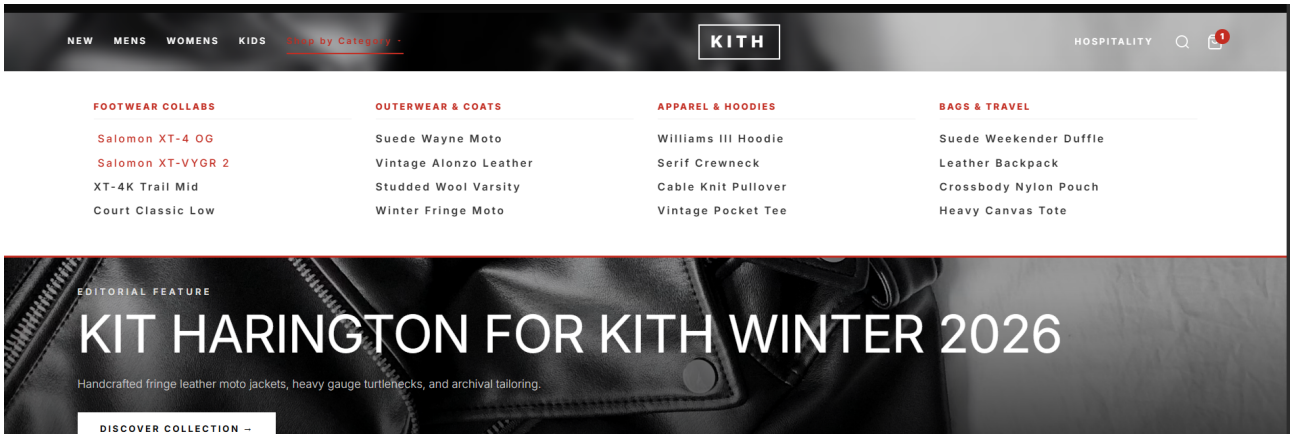

Figure 1: Mega-menu open on desktop (4 columns, red accent hue 4°, cart badge showing 1).

- The column count is set by `--mega-cols: 4` in `style.css` and the panel uses `grid-template-columns: repeat(var(--mega-cols), 1fr)`.
- Desktop layout starts at the breakpoint with `@media (min-width: 652px)`. Below it (`max-width: 651.98px`) the menu collapses into a hamburger built from a hidden checkbox and a label, with a `<details>` accordion for each group.
- The accent colour comes from `--accent-hue: 4`, so links, headings and the panel border all follow the same hue.

Task 2: Checkout Form (HTML5 validation only)

The checkout page has two fieldsets, **Contact** and **Delivery**. They sit side by side at 652px and wider, and stack below that. Every rule is a native HTML5 attribute; the page contains no JavaScript.

Field	Validation used
Full Name	required, minlength="3"
Email Address	type="email", required
Phone Number	type="tel", required, pattern="03[0-9]{2}-[0-9]{7}" (03XX-XXXXXXX)
Street Address	required, minlength="5"
City	select, required (empty "Select City" option is invalid)
Delivery Date	type="date", required, min="2026-10-29", max="2026-12-20"

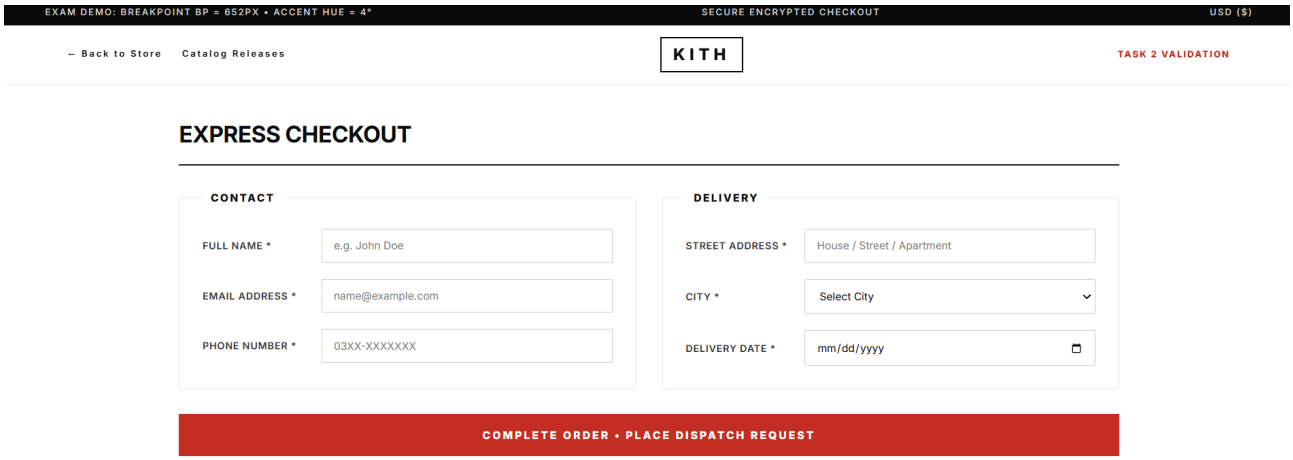

Figure 2: Checkout form on first load. Required fields are marked with * and no error is shown yet.

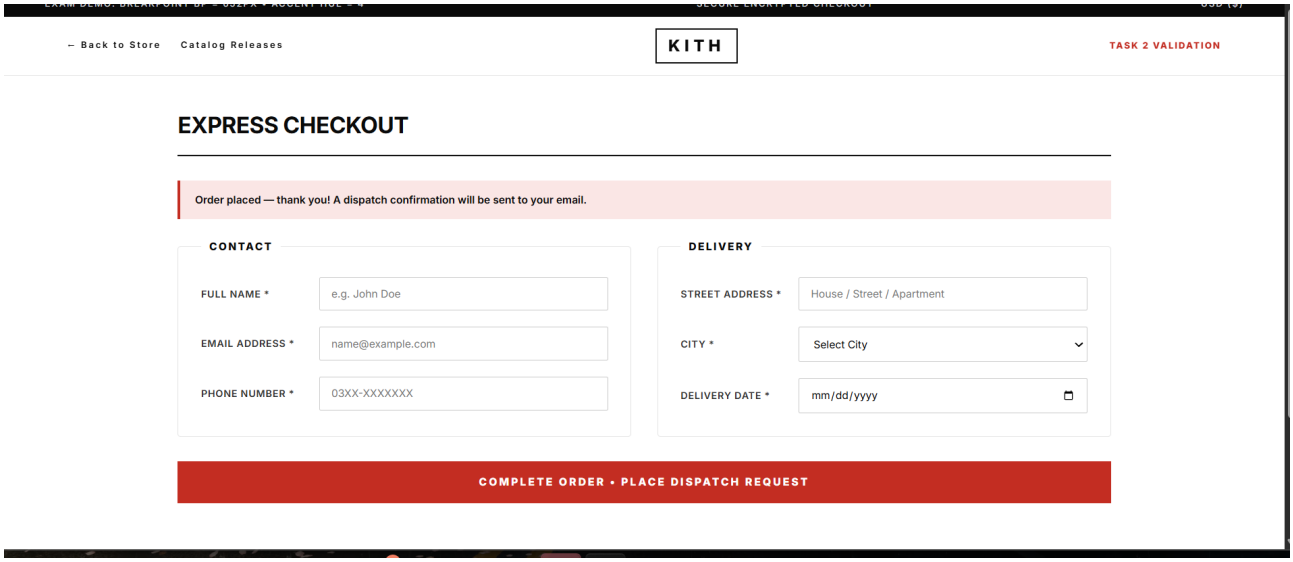

Figure 3: After a valid submit the form goes to `checkout.html#order-placed` and the confirmation banner is shown by the CSS `:target` rule.

- The browser blocks submission while any field is invalid. The error messages appear through `:user-invalid` styling, so nothing is shown before the user interacts.
- The delivery window is 2026-10-29 to 2026-12-20, which is the exam date plus N = 52 days.

Task 3: Cart Badge and Mini-Cart (plain JavaScript)

The cart badge and mini-cart are written in plain JavaScript (`script.js`). They work on both the home page and the product page, because the cart is saved in `localStorage`.

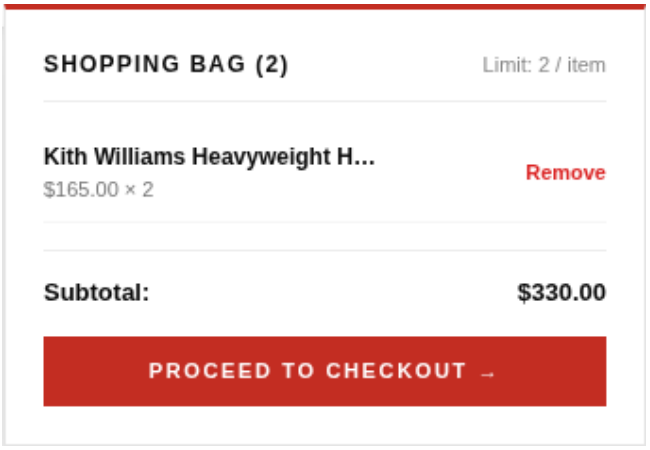

Figure 4: Mini-cart after adding the same product twice. The badge and header show 2, and the subtotal is $165 × 2 = $330.00.

- Cart limit: `MAX_PRODUCT_LIMIT = (N % 4) + 2 = 2`. When a product reaches 2 units its button becomes disabled and reads "Limit reached".
- The subtotal and the item count are both calculated with `Array.prototype.reduce()`.
- The badge updates on every add or remove. "Remove" lowers the quantity by one and keeps the panel open; the mini-cart closes on an outside click or with Escape.
- Cart rows are built with `textContent`, not `innerHTML`, so item names are always shown as plain text.

Files and Tools

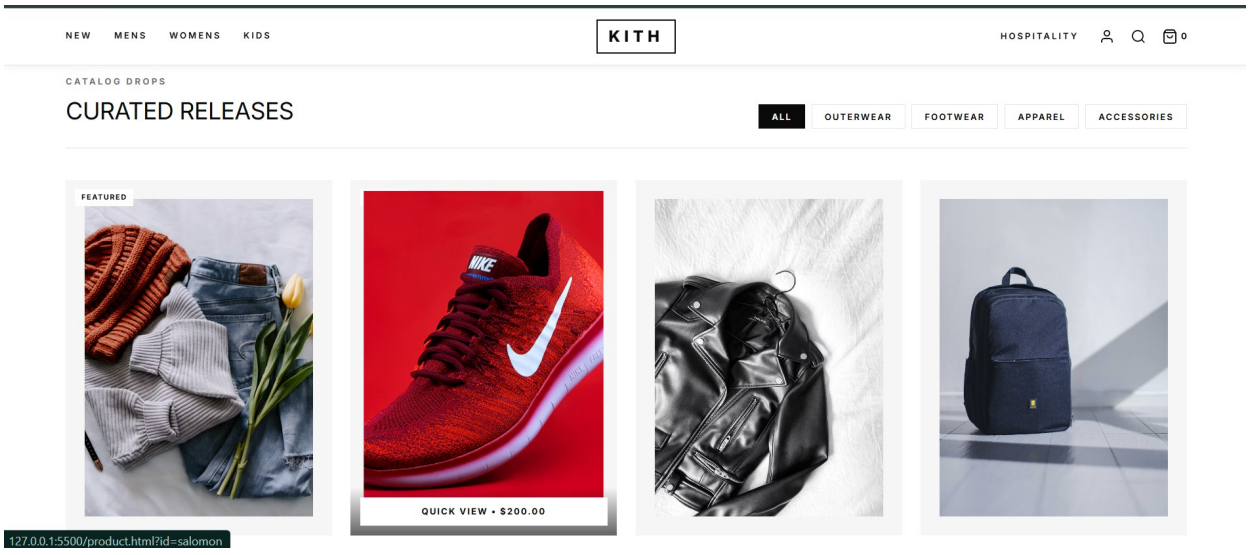

- **Files:** index.html, product.html, checkout.html, style.css, script.js, README.md.
- **AI tools used:** Claude (Anthropic).
